GraphTrust Publication Figure Set

Baktiyar Ablaikhan · NSRI Summer Research Hackathon 2026

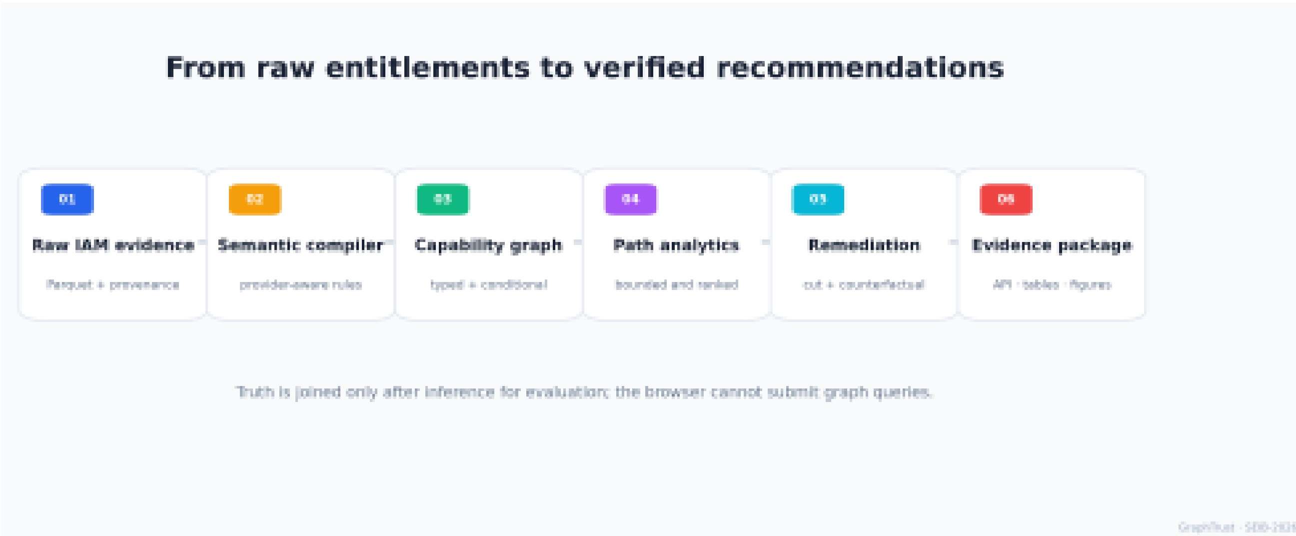

Figure 1: Evidence-preserving GraphTrust analysis pipeline.

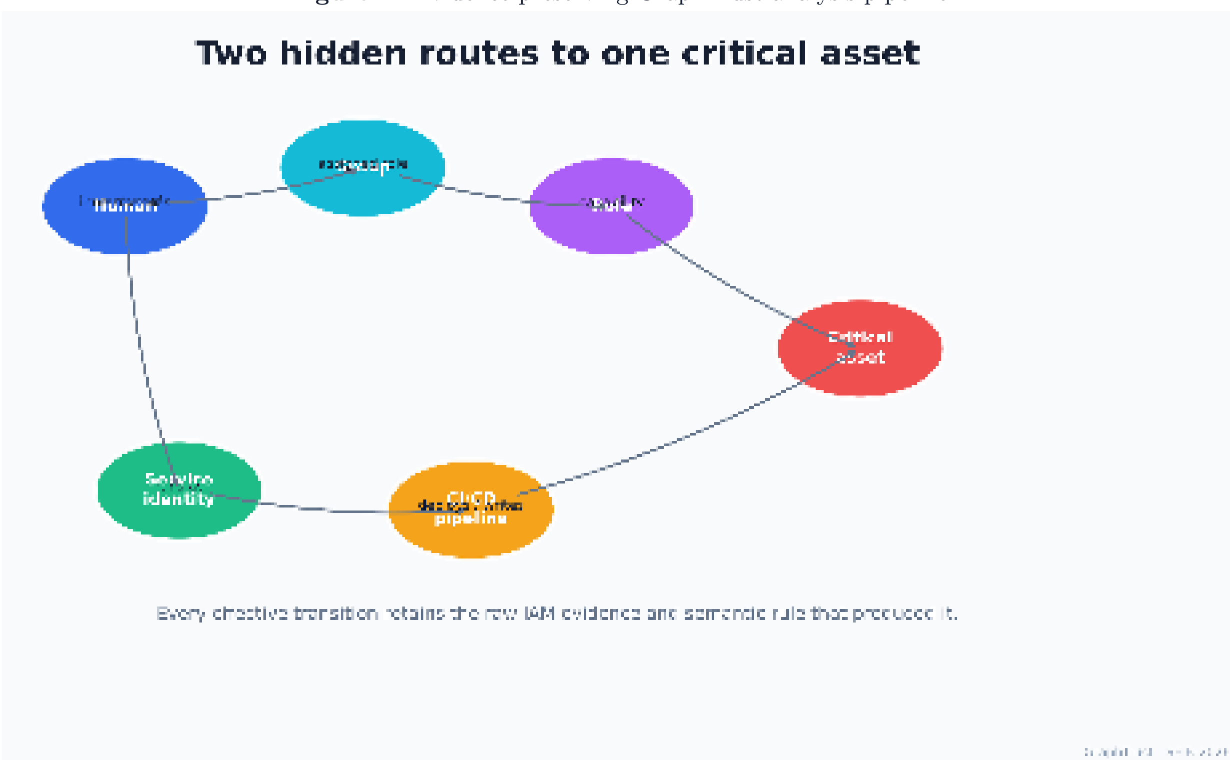

Figure 2: Canonical heterogeneous identity graph and two transitive routes.

Figure 3: Highest-ranked evidence-linked privilege path.

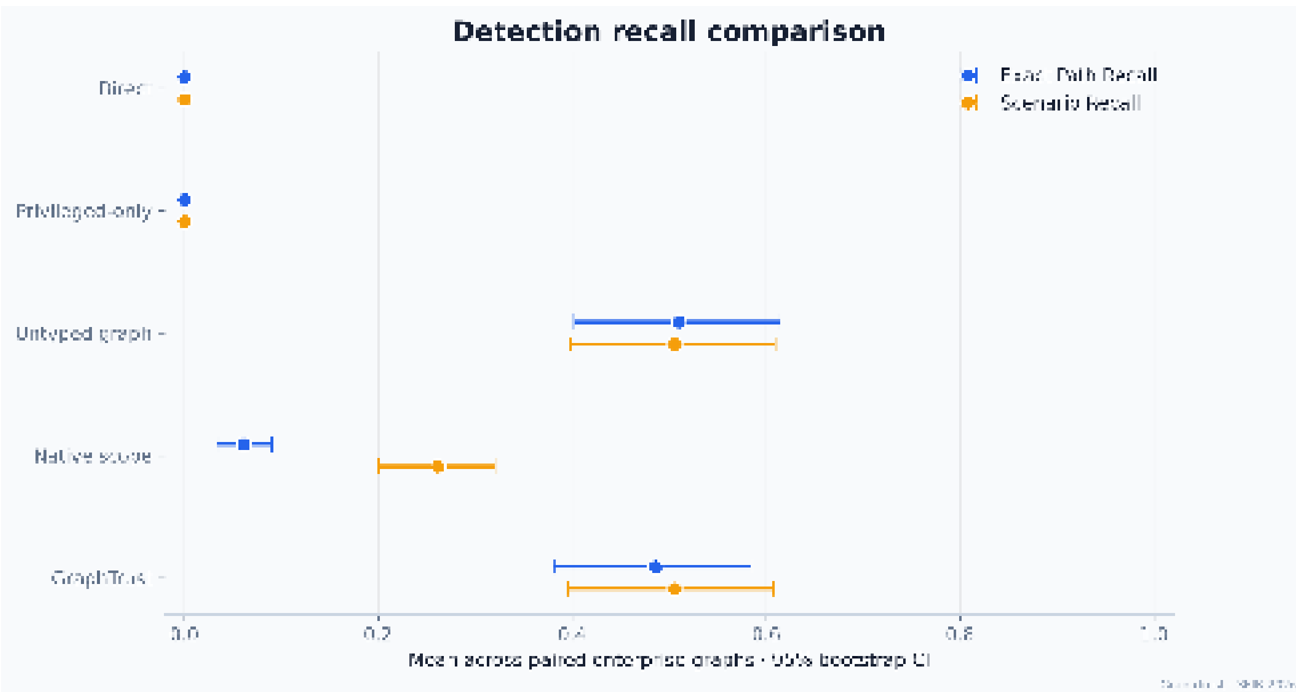

Figure 4: Detection recall with graph-level bootstrap intervals.

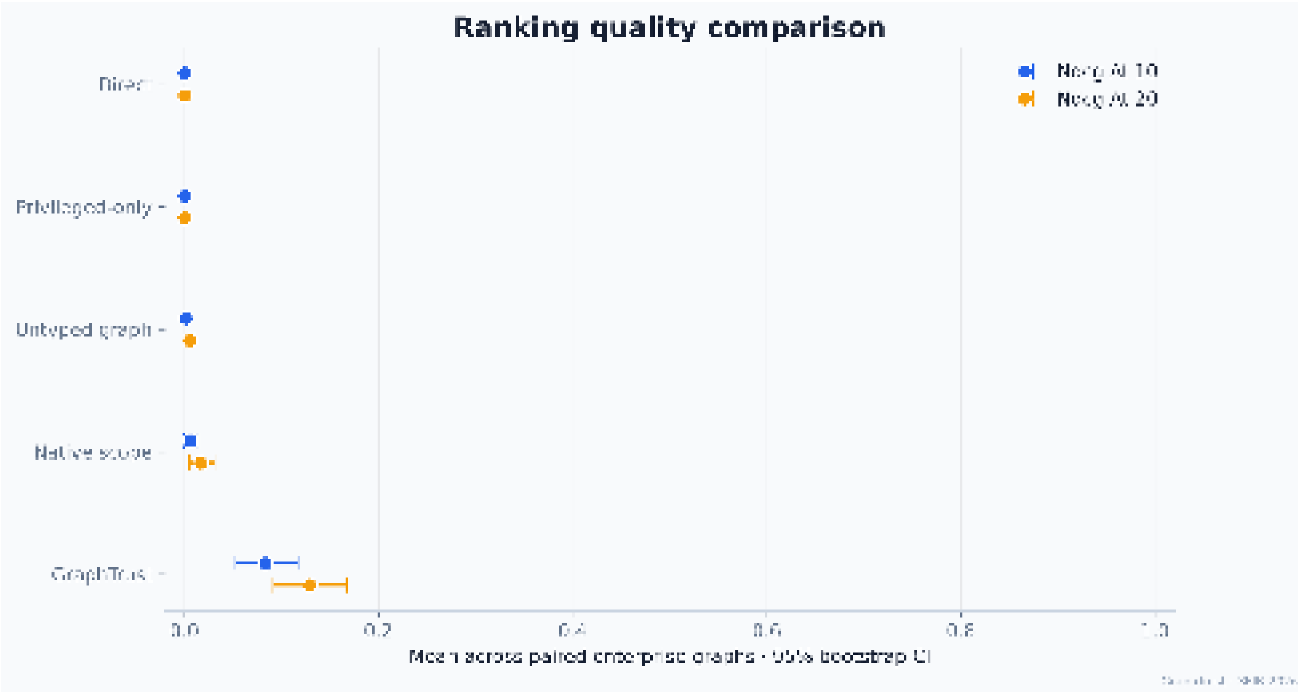

Figure 5: Top-ranked relevance across the five audit methods.

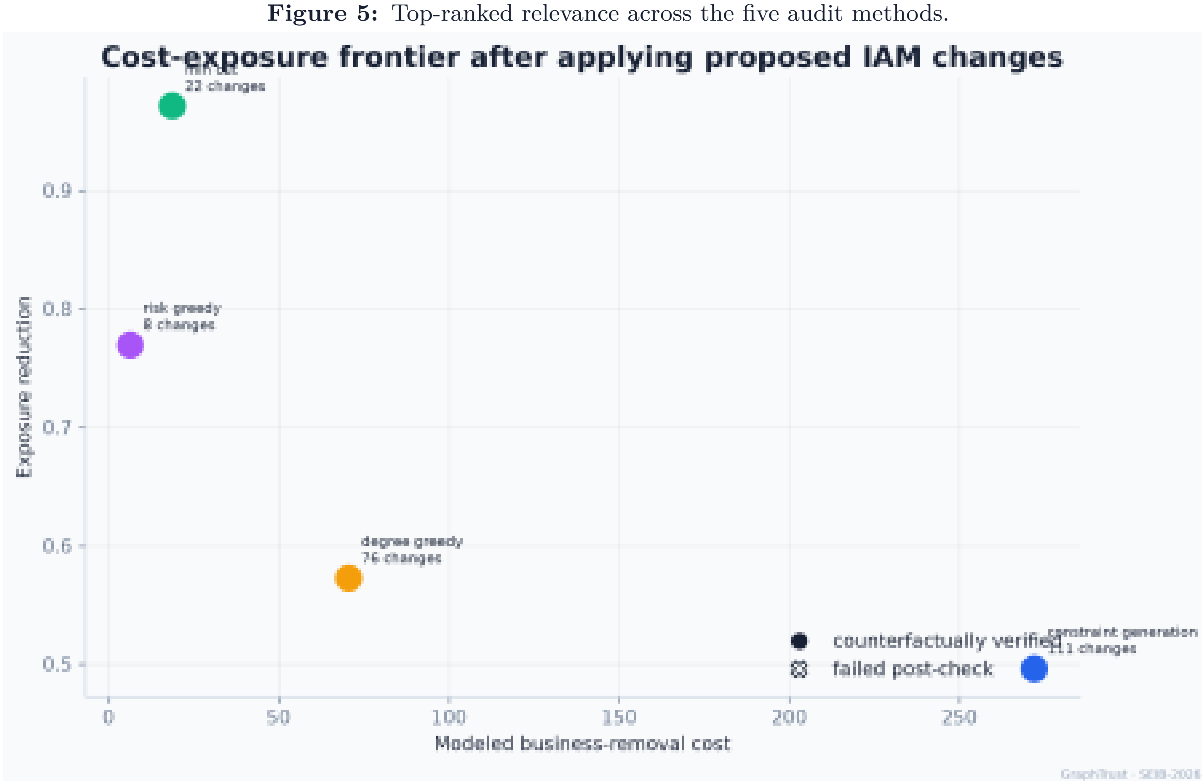

Figure 6: Remediation cost, exposure reduction, and post-check state.

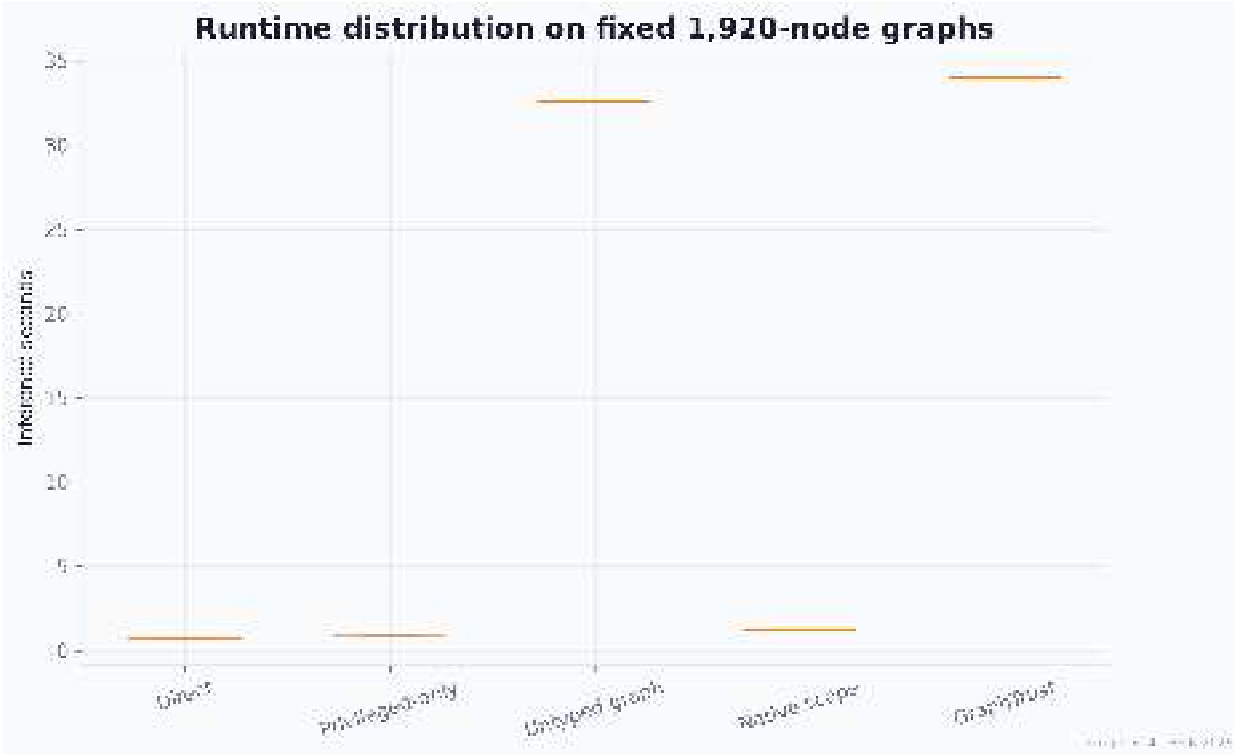

Figure 7: Runtime distribution on fixed-size graphs; no scaling claim is made.

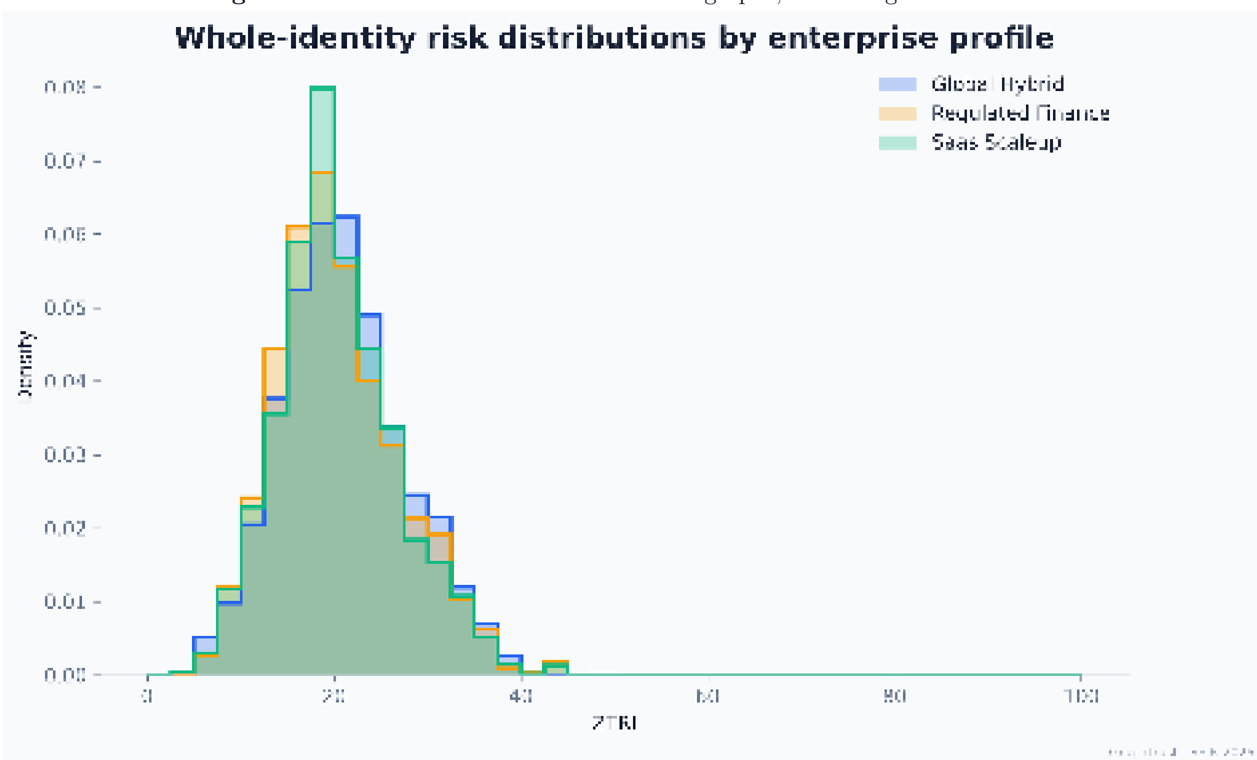

Figure 8: GraphTrust ZTRI distributions across enterprise profiles.

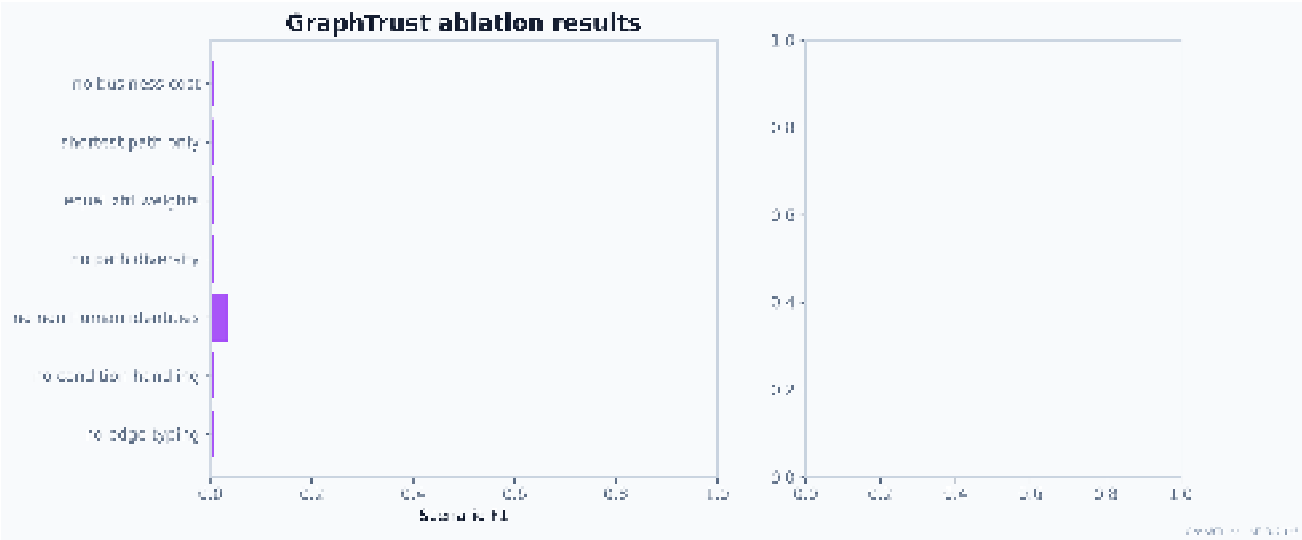

Figure 9: Ablation study on the pre-specified verification graph.

Figure 10: One-at-a-time and 1,000-sample weight sensitivity.

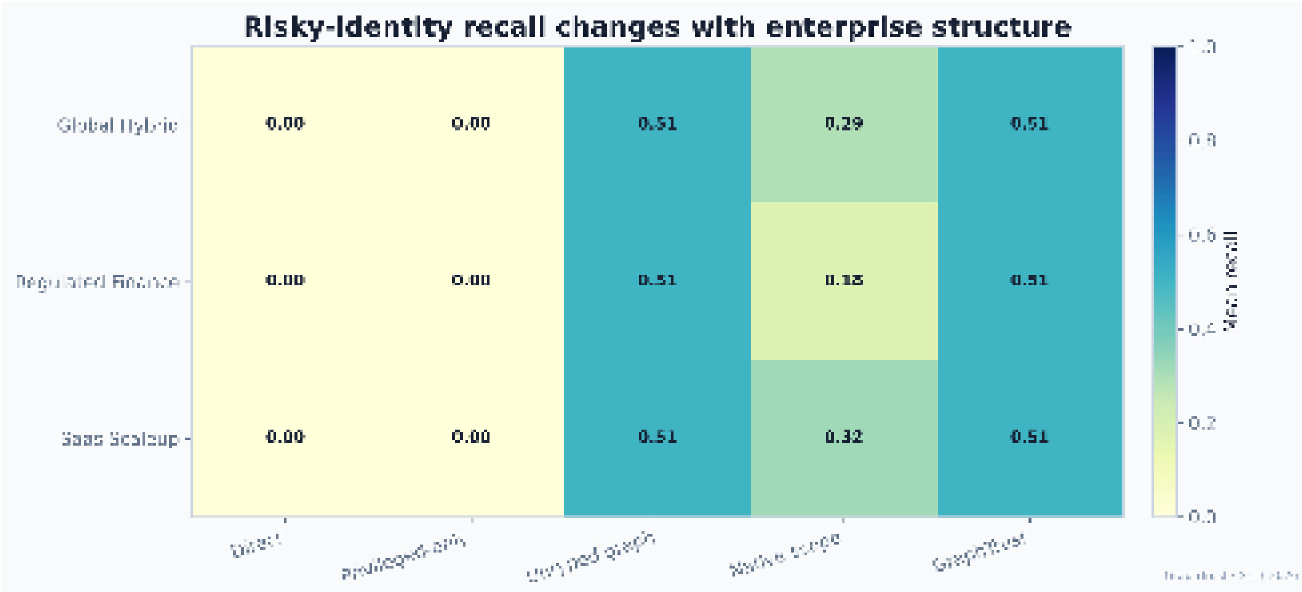

Figure 11: Risky-identity recall by enterprise structure.

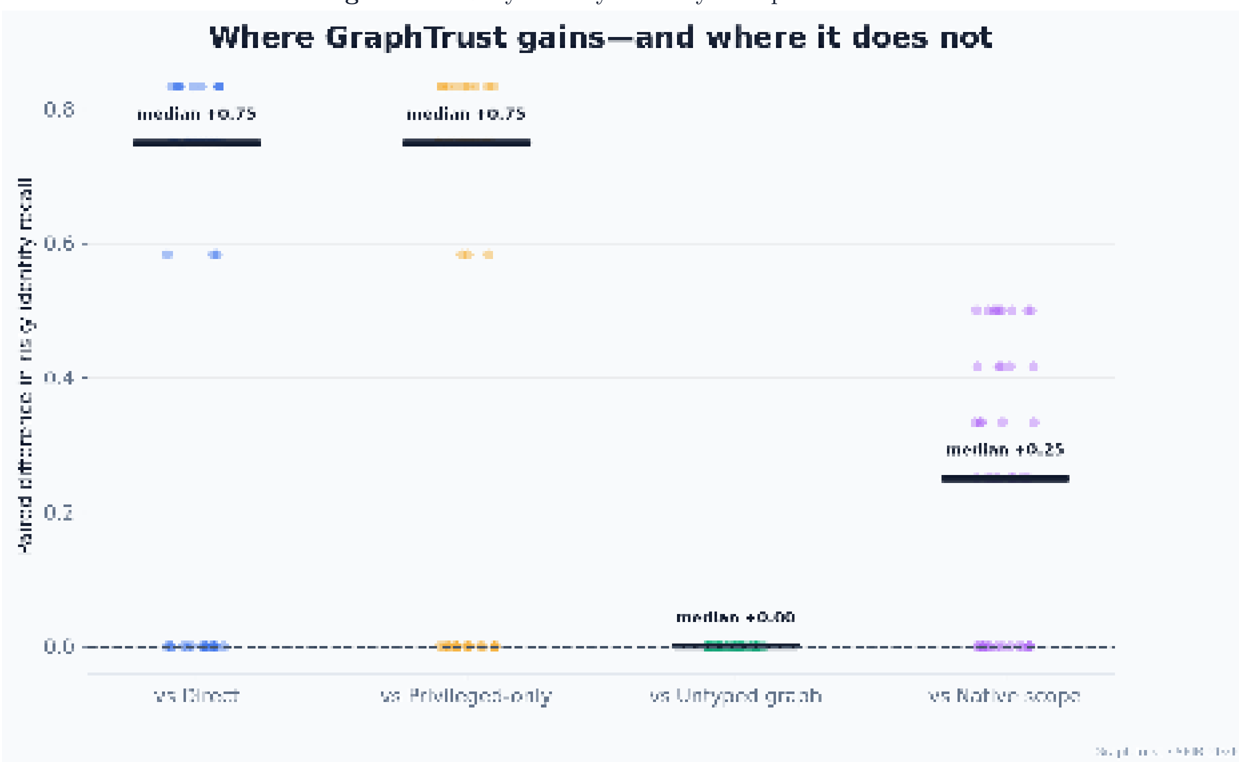

Figure 12: Paired GraphTrust differences against each baseline.

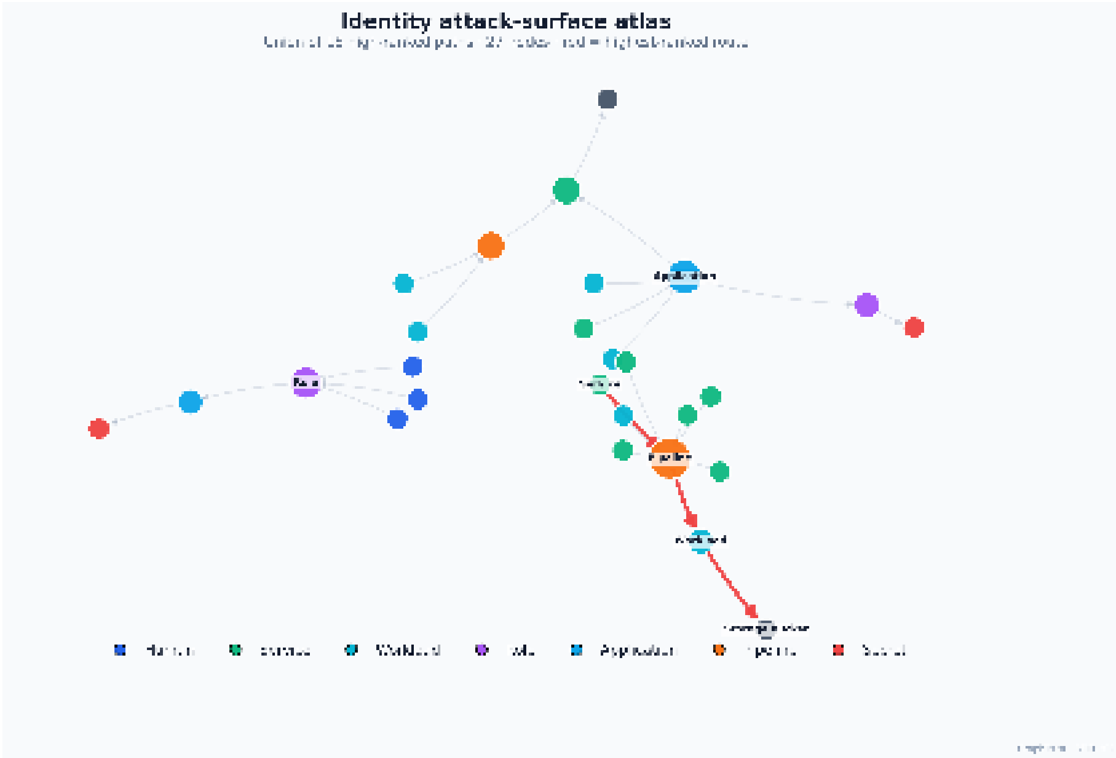

Figure 13: Evidence-backed attack-surface atlas with the highest-ranked route highlighted.

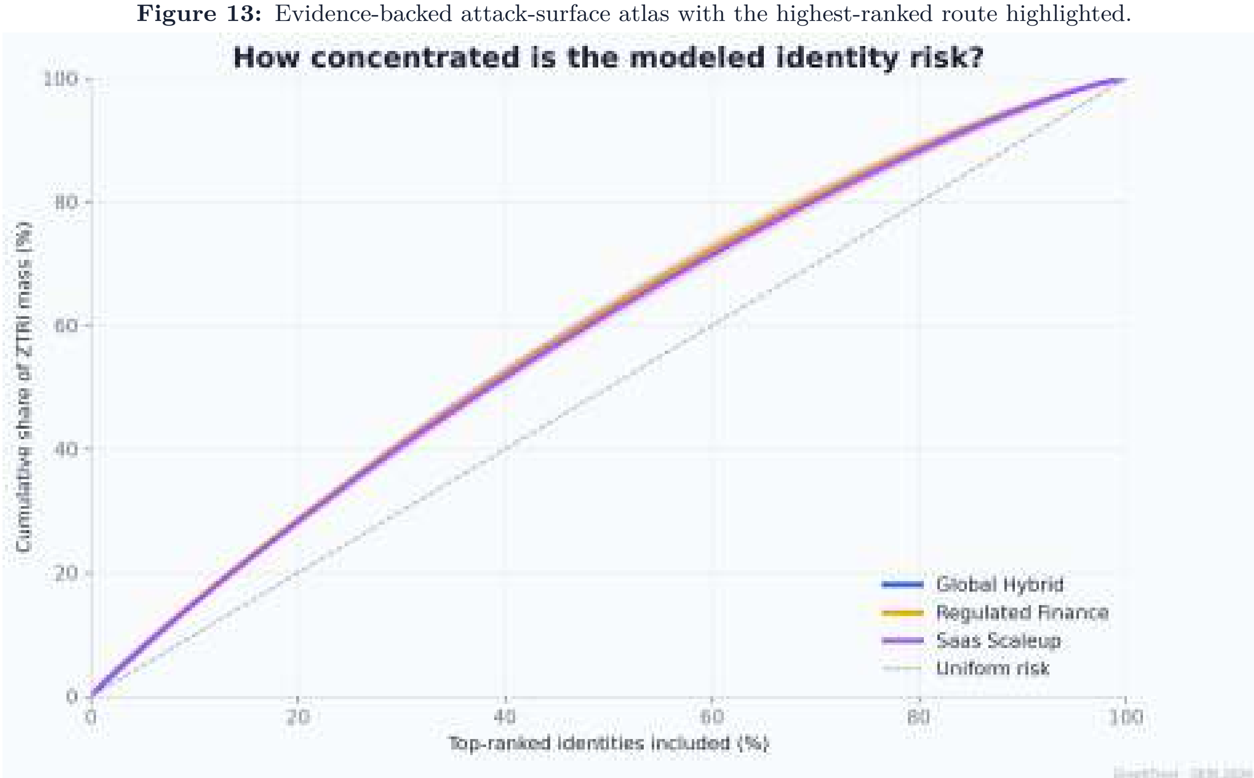

Figure 14: Concentration of modeled identity risk across enterprise profiles.

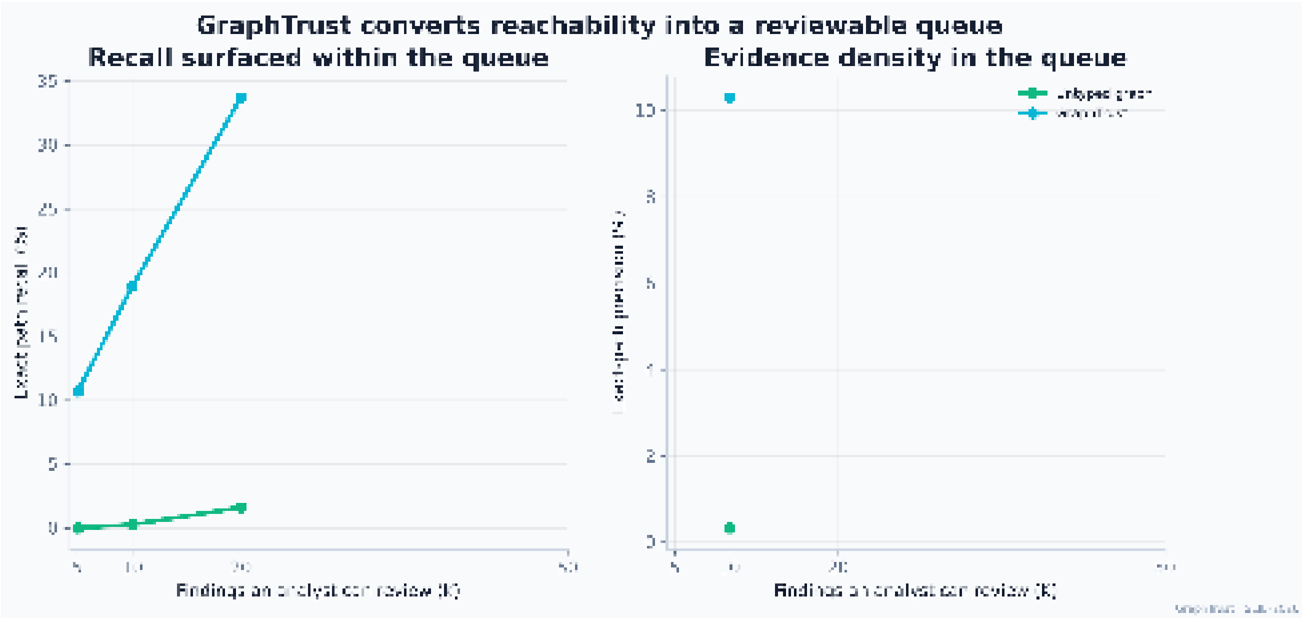

Figure 15: Analyst review-budget curve from the operator audit reanalysis.

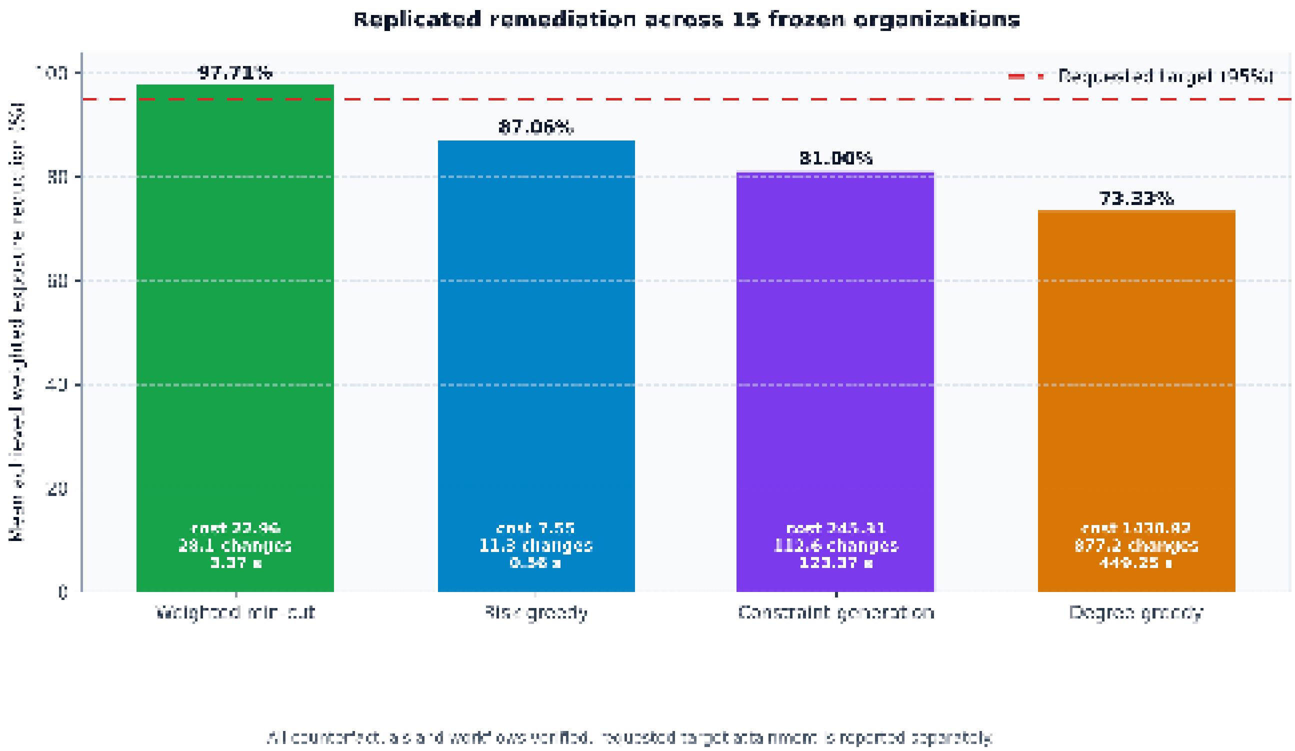

Figure 16: Replicated remediation outcomes across 15 frozen organizations.

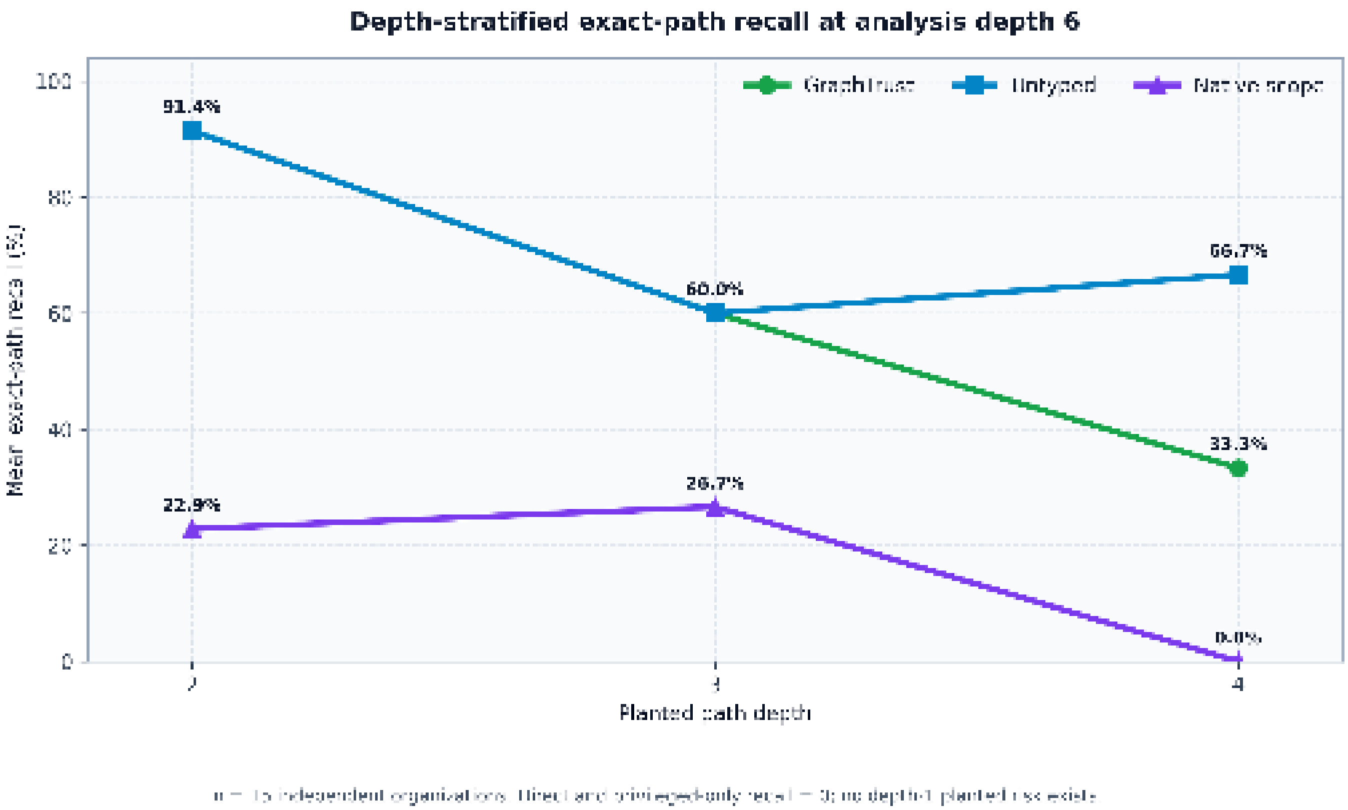

Figure 17: Depth-stratified exact-path recall at analysis depth six.
